Order: Basic Latin; other letters (alphabetical); others grouped by MUFI category

Case-pairs must always be handled by adjacent cvXX features, with uppercase first

Where JuniusX lacks a feature for a Basic Latin letter, cvXX features (in gray) are reserved

Where case pairs exist, they must:

1) come first in the sequence

2) have matching indexes for upper- and lowercase variants

cv99 is still available for use

It would be good to reserve a ss feature for future misc. variants, but:

1) none are currently available, so a feature would have to be retired. Which one?

2) Possibilities:

a) long s or r rotunda features moved to cv (but disables MS Word users)

b) on or more of the runic features (ss12-15): does anyone use these?
